BILE COMMUNICATION TERMINAL AND SYSTEM FOR CONVERTING PICTURE FILE FORMAT THEREFOR(57) Abstract: The present invention  
discloses a method for displaying a  
high resolution picture in a mobile  
communication terminal having a low  
resolution display means, the mobile  
communication terminal and a system  
for converting a picture file format  
therefor. The method for displaying the  
high resolution picture in the mobile  
communication terminal includes the  
steps of: dividing picture data into a  
plurality of unit blocks, and converting  
the picture data into a picture file format  
including the plurality of unit block  
picture data and indexes for access to  
each of the block picture data; extracting  
minimum unit block picture data  
composing a partial picture which will  
be initially outputted to a display unit  
from the picture file by using the index  
information of the picture file format,  
and outputting the initial picture; and  
extracting the corresponding unit block picture data from the picture file in the movement direction by using the index information  
of the picture file format in accordance with generation of scroll action during the display of the picture, and outputting the  
position-moved picture.
